# Stages of fuþark in Scandinavia

- 1st-2nd century AD: Older Germanic fuþark

## Highly standardised and idealised fuþark examples

ᚠᚢᚦᚨᚱᚲᚷᚹ · ᚺᚾᛁᛃᛇᛈᛉᛊ · ᛏᛒᛖᛗᛚᛜᛞᛟ (24 characters)

# Stages of fuþark in Scandinavia

- 1st-2nd century AD: Older Germanic fuþark
- 7th-8th century AD: Younger fuþark

## Highly standardised and idealised fuþark examples

ᚠᚢᚦᚨᚱᚲᚷᚹ · ᚺᚾᛁᛃᛇᛈᛉᛊ · ᛏᛒᛖᛗᛚᛜᛞᛟ (24 characters)

ᚠᚢᚦᚬᚱᚠ : ᛯᚾᛁᚾᛋ : ᛏᛒᛉᛚᛦ (“long-branch” version, 16 characters)
ᚠᚢᚦᚨᚱᚠ : ᚾᛁᛁᛋ : ᛅᚾᛏᛚᛦ (“short-twig” version, 16 characters)

# Stages of fuþark in Scandinavia

- 1st-2nd century AD: Older Germanic fuþark
- 7th-8th century AD: Younger fuþark
- 9th-11th century AD: Medieval fuþork

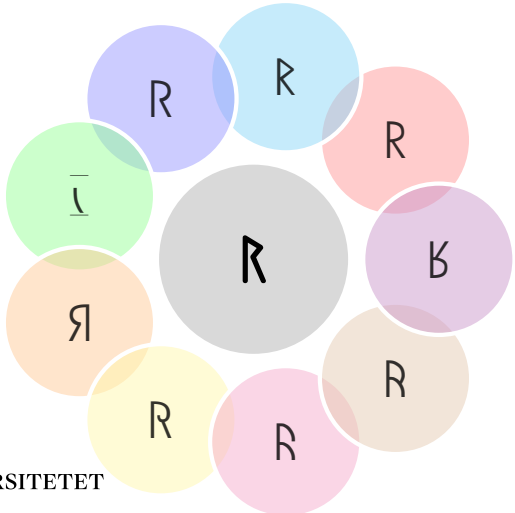
## Highly standardised and idealised fuþark examples

ᚠᚢᚦᚨᚱᚲᚷᚹ • ᚺᚾᛁᛃᛇᛈᛉᛊ • ᛏᛒᛖᛗᛚᛜᛞᛟ (24 characters)

ᚠᚢᚦᚭᚱᚠ : ᛯᚾᛁᚾᛋ : ᛏᛒᛦᛚᛯ (“long-branch” version, 16 characters)
ᚠᚢᚦᚨᚱᚠ : ᚾᛁᛁᚾ : ᛏᚾᛏᛚᛯ (“short-twig” version, 16 characters)

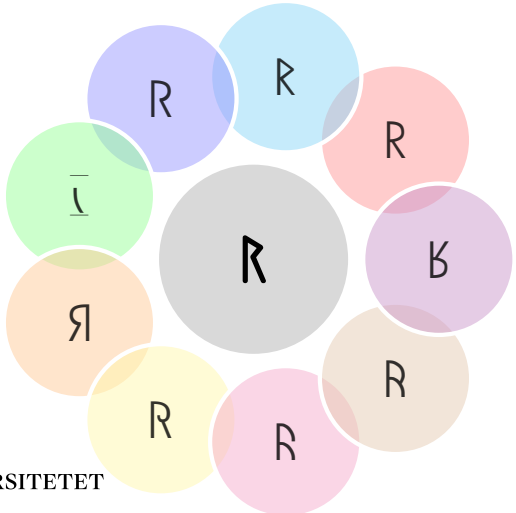
ᚠᚢᚦᚨᚱᚠ : ᚾᛁᛁᚾ : ᛏᛒᛦᛚᛯ ᚾᛯᛋ etc. (16 + x characters)

# Time- and geography-specific variants?



- ᚱ = “ideal”
- ᚱ = “older”
- ᚱ, ᚱ = “Greenlandic”
- ᛦ = staveless
- ᚱ, ᚱ = flipped
- ᚱ = ???

# Time- and geography-specific variants?



- ᛦ = “ideal”

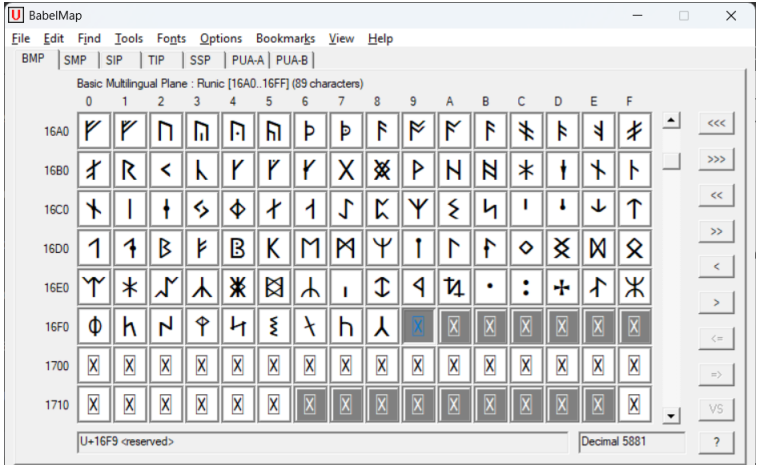
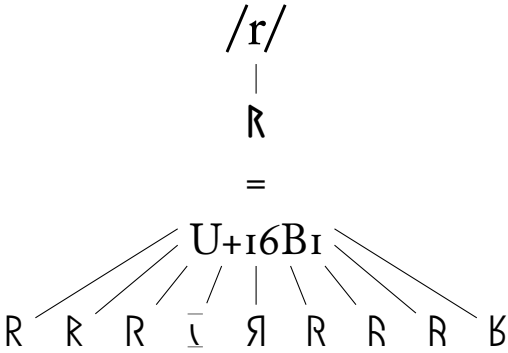
**Unicode block Runic**

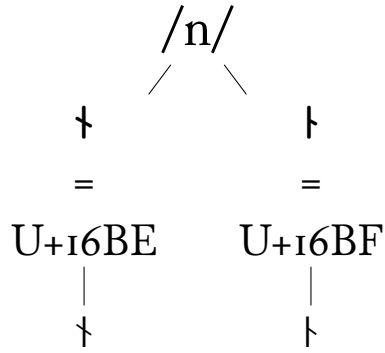
U+16B1 RUNIC LETTER RAIDO RAD REID R

# Unicode block Runic

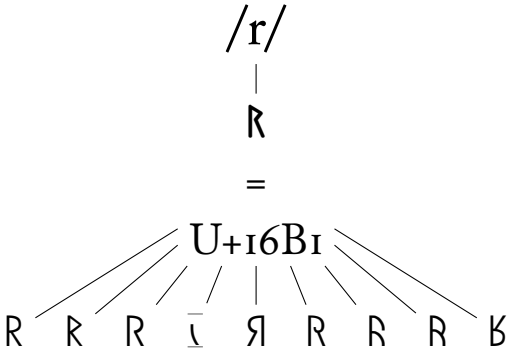


# Unicode Runic: Allograph Inconsistencies

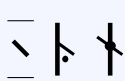




# Unicode Runic: Allograph Inconsistencies



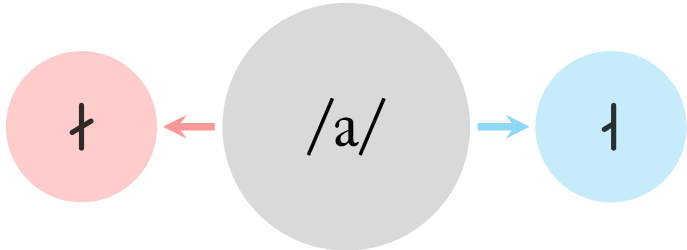
**Problem 1: Leftovers**



**Problem 2: Logic**

ɑ ≠ a ?

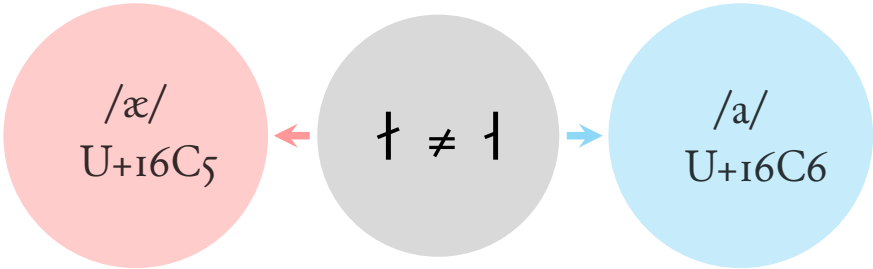
# Unicode Runic: “Homoglyphs”



**Homoglyph**

Homographs, except they used to be allographs once. But at some point someone decided that they could just as well be used for different sounds.

# Unicode Runic: “Homoglyphs”



**Homoglyph**

Homographs, except they used to be allographs once. But at some point someone decided that they could just as well be used for different sounds.

# Levels of Enquiry – Depth of Detail

**Just an r**

ᚱ

- runic orthography is not standardised
- some runes can represent up to six different sound values
- transcription (rune = Roman letter) traditions vary between runologists

**A very special r**

- searching for specific variants relevant to study (temporal/spatial)
- establish distinction between allographs and independent graphemes
- more accurate visual representation

# Unicode-based Medieval Minimal Character Set

- reduce Unicode Runic to minimal character set applying consistent criteria
- code actual runic character/codepoint into separate entity type in relational database

# Relational Database Entity Types: Runic Characters

- can include more than one runic character (bindrune)

- splits visually distinct units up into component parts
- ı bindrune = ı+ı(+ı) digital representations

- digital representation linked to codepoint from minimal character set

# Character Data Entry

| counted-CharID | counted-CharRepID | charVar-CharID | counted-CharRepAlt | countedCharRepComment | countedChar-RepSourceID |
|---|---|---|---|---|---|
| FK #1 | PK #7 | ᚢ | 1 | It could be a **u** | C 2024 |
| FK #1 | PK #8 | ᚱ | 2 | It could be a **r** | C 2024 |
| FK #2 | PK #9 | ᚠ | 0 | | C 2024 |
| FK #3 | PK #10 | ᚦ | 0 | | C 2024 |
